AutoCAD became Autodesk's flagship application by the mid-1990s. By 2005, it had become a billion-dollar business.[2] In 2010, AutoCAD sold 7 million licenses.[3] AutoCAD is the largest independent application in its category on the Mac App Store.[4] History 1982–1995: Autodesk and predecessors Autodesk began as the design automation company of its namesake firm, Automatic Data Processing (ADP), founded in 1969. In 1981, the company acquired Maxon Computer, a small data processing firm with an in-house CAD and drafting application, for \$6 million, and the latter became Autodesk. With this acquisition, Autodesk acquired a popular desktop CAD program, DeskSketch, but was unable to sell it in the United States at the time, as the US Department of Defense banned the importation of closed-source software into the United States. Autodesk sold DeskSketch to other parties outside the U.S. in 1983. In 1984, Autodesk released the first version of AutoCAD, a desktop application. In 1986, Autodesk released AutoCAD LT, a version of AutoCAD for low-end machines. In 1988, Autodesk added the award-winning 3D modeling capabilities found in AutoCAD LT to its flagship AutoCAD product. In 1991, Autodesk released AutoCAD 1992, its first major product refresh, and also introduced version 2.0 of AutoCAD. In 1994, Autodesk released AutoCAD for Windows 3.0, the first version of AutoCAD for Windows, and released the first two versions of AutoCAD for Windows under the Windows 95 operating system. 1995–2005: Autodesk and successors In 1996, Autodesk launched AutoCAD Next, a graphical revamp of AutoCAD with new tools for 3D drawing. In 2000, Autodesk launched AutoCAD 2000. In 2001, Autodesk released a new version of AutoCAD (2002), with a name change to AutoCAD 2002. The year 2001 also saw Autodesk acquire Fortune 100 company CACI (now a wholly owned subsidiary). In 2002, Autodesk released AutoCAD LT version 2.5. In 2003, Autodesk released version 2.0 of AutoCAD Classic

Field of the Invention The present invention relates to a brake-by-wire apparatus for a motorcycle. 2. Description of the Related Art A vehicle, such as a motorcycle, is equipped with a brake device. The brake device includes a brake caliper and a brake cable. The brake caliper is movable between a brake position and a released position. The brake cable is connected to the brake caliper. When a brake pedal is depressed, a brake switch is turned on and the brake caliper is moved to the brake position. In recent years, there is known an electric brake device, in which a brake device and a motor are combined and a brake operation is carried out using the motor. In such an electric brake device, a power source of the vehicle is electrically connected to the motor. Therefore, it is possible to carry out an operation, which is a normal operation of a brake device, without carrying out a pedal operation (depressing the brake pedal). When the brake pedal is normally operated, the brake caliper is kept in the brake position. In contrast, when the brake pedal is depressed, the brake caliper is moved to the released position. That is, the brake caliper is moved to the brake position or the released position depending on the depression or release of the brake pedal. The brake device may be applied to a motorcycle, which is a vehicle. When a vehicle which is not equipped with a brake device is equipped with a brake device, a mechanical transmission mechanism, which transmits a braking operation to a transmission shaft, is configured. The brake device disclosed in JP

2008-179135A is applied to a motorcycle. The brake device includes a brake caliper, a gear mechanism, which is provided with the brake caliper, and a motor. The gear mechanism transmits the braking operation to the transmission shaft. When the brake device is applied to the motorcycle, a rotational shaft of a1d647c40b

According to a recent article, The third version of U.S. financial reforms will be put into effect to address the evolving crisis in the mortgage market, which is causing a rise in mortgage delinquency rates as well as declining home values. This new market regulation will, for the first time, require lenders to evaluate the income of loan applicants who are actively searching for a home to purchase. According to the article, Fannie Mae and Freddie Mac are already implementing this rule, which means homebuyers who apply for a mortgage through these companies will be required to have the same level of income as the house they are purchasing. Although this new rule is not set to go into effect until the end of this year, it is predicted that this new regulation will cause mortgage rates to rise.
